

InfraTechAI: Complete Company Overview and Internal Strategic Brief

1. Mission and Core Identity

InfraTechAI is a hybrid product-and-service-based software company dedicated to the automation and digitization of small and medium-sized businesses (SMEs), including restaurants, salons, medical clinics, and coaching institutes, through specialized SaaS products and custom web solutions.

We differentiate ourselves by moving beyond simple web design; we build comprehensive business operating systems that integrate operations, billing, staff management, customer relations, and advanced reporting. Our central hub is located at <https://infrotechai.cloud>.

2. Core Business Model

Our revenue model is divided into two distinct categories to balance scalability with immediate cash flow:

- In-house SaaS Products: Our primary scalable offerings, utilizing a subscription-based model combined with an initial setup fee.
- Websites & Custom Projects: These involve a one-time payment plus ongoing hosting and domain fees, serving as essential cash-flow and portfolio-building projects.

3. In-house SaaS Product Portfolio

Our SaaS products are priced according to regional requirements and include a one-time setup fee and recurring monthly or yearly subscription options. Each system provides a comprehensive management suite.

- Restaurant Management System: A complete operating system including table reservations, dine-in ordering, POS billing, optional inventory management, sales reporting, invoice generation, online food ordering, an admin panel, and a full frontend website.
- Salon Management System: A business automation system featuring real-time online booking, staff management, payment processing POS, inventory and product tracking, loyalty marketing tools, client CRM, multi-branch/franchise support, business intelligence analytics, and dedicated admin/staff panels with a basic website.
- Clinic Management System: A mini-hospital management suite encompassing patient records, live token/queue systems, doctor profiles (specialization, timing, and fee management), online and walk-in appointment scheduling (with rescheduling and cancellation), automated SMS/WhatsApp reminders, billing, digital prescription systems (print/WhatsApp), pharmacy stock tracking, lab test management with report attachments, and a comprehensive admin panel with a free website.
- Business Automation Tool: A custom internal suite designed to automate staff workflows, data handling, reporting, and general business processes.
- AbhyasCore (Coaching Management System): Designed for coaching institutes and classes to manage students, fees, attendance, testing, and administrative reporting.

4. Custom Website and One-Time Projects

The following projects represent our portfolio of one-time payment engagements plus recurring hosting and domain costs:

- Cafes: Butterwala and Co. (9k), Coffee Toee (8k), Balmas (8k).
- News Sites: Star News (27k), Incoming (30k), Incoming (30k)

- News Sites: Star News (27k), Incoming (30k), Incoming (30k).
- Restaurant Sites: Persian Darbar (40k), Feel-In-Saudia (30k), Hotel Royal Inn (15k).
- Miscellaneous: Fiji Water (15k), Linear Classes + Coaching System (25k), Baklava World (10k).

Historically, some projects were managed independently by Hussain's team. Moving forward, all efforts will be merged into a unified collaborative framework.

5. Financial Framework and Profit Logic

Net profit is calculated by taking the total payment received and subtracting backend/database costs, third-party subscriptions, and a 10% company overhead cut.

- Alok (Sales/BD/Operations): 25% of Net Profit per client commission.
- Company: 10% of total payment.
- Me (Internal Split): 32.5% of Net Profit.
- Hussain (Internal Split): 32.5% of Net Profit.

6. Sales and Delivery Workflow

- 1. Outreach: Initiate contact via cold calls and messaging.
- 2. Presentation: Demonstrate the demo website and system capabilities.
- 3. Trial Phase: Offer a 3-day free trial for SaaS products; provide a demo showcase for custom products.
- 4. Agreement: Secure a 50% advance payment from the client.
- 5. Implementation: Begin development and configuration.
- 6. Delivery: Complete setup, configuration, and handover within 7 days.
- 7. Finalization: Collect the remaining payment balance.

7. Strategic Role: Alok

Alok's role is critical to business development and operational readiness. Responsibilities include pitch calls, client presentations, product explanations, invoice handling, business development, and manual system testing.

The operational philosophy is simple: Alok acquires the clients, while the technical lead builds the systems, creating a synergy that allows the company to scale.

8. Market Positioning and Future Outlook

We are not merely website makers; we are a business automation company. We sell operational control, reduced chaos, enhanced management, superior reporting, and increased professionalism.

InfraTechAI has moved beyond the 'side project' phase into a dedicated company-building phase. With ready products and a forming structure, our immediate focus is on volume, systemization, and rapid scaling.
